WordPress Based Memebrrs Portal

Custom HTML / CSS / JavaScript /PHP BackEnd Systems
(Register/Login/Automated Emails/Payment Gate
Integration/Pacakges Selection/Tickets)

Ticketing System

A lightweight, self-hosted ticketing system for WordPress that allows registered users to submit, view, and manage support tickets directly from the frontend. This plugin integrates seamlessly with Ultimate Member for user registration and login, providing a clean and secure support workflow for member-based websites, clubs, and internal teams.

Based on PHP / HTML / CSS / JavaScript

Voting System

A self-hosted, token-based anonymous voting system for WordPress that allows users to vote securely on multiple questions during a defined time window. Designed for small organizations and elections, it ensures full anonymity by validating tokens without tracking users. It includes a real-time admin dashboard for configuring ballots, monitoring participation, viewing live results, and generating detailed post-election reports.

Based on PHP / HTML / CSS / JavaScript

Battleship Game

A terminal-based Battleship game written in Python, supporting both 1-player (vs CPU) and 2-player modes. This project is a fun implementation of the classic strategy game where players attempt to sink each other's ships on a 5x5 grid.

Based on Python

To Do List

This is a simple command-line To-Do List application written in Python. It allows users to manage their daily tasks with ease, using a text-based menu to add, view, complete, and delete tasks.

Based on Python

Social Book Store

Web application that allows users to buy and sell books online. Users can create an account, browse available books, list their own books for sale, and manage their transactions.

Based on JAVA / SQL / HTML / CSS
